The *astro*

GPS - Based Speed Sensor

- **Great Price**
- **Compact** (2¼" dia., ½" high)
- **Accurate**
- **Durable**

Improve Productivity and Efficiency

The Astro 5

The Astro series includes 2 red status lights on the interface module:

- **POWER:** Turns on when power is applied to the unit.
- **VALID GPS:** Blinks when the GPS receiver is working but has not yet acquired satellites. Once a satellite fix has been achieved, it will be on steadily. If the GPS system fails, the light will turn off.

Typical Startup Times:

- Sky search to acquire almanac = 5 mins.
- Cold start = 2.5 mins.
- Warm start = 30 secs.

The Astro GPS Speed Sensors are a direct replacement for magnetic wheel speed sensors or radar guns and can interface to most brands of monitors and controllers.

The magnetic mount bracket is standard and allows for quick installation and easy transfer from one vehicle to another. Optional mount kits also available.

Not affected by crop canopies or adverse ground conditions.

astro II Based on accurate yet economical 1 HZ GPS receiver.

astro 5 Same great features as the Astro II, but based on a 5 HZ GPS receiver for faster, dynamic response to speed changes.
